The Collaborative Textbook Project

Would you like to be part of an **innovative project** that will give hundreds of students access to the educational material that they need, and give you the opportunity to **have your material published**? Volunteer to help the Saylor Foundation and colleagues from around the world create a collaborative, openly licensed textbook!

Should you choose to join us in our efforts, we will together create a suit of high quality, **crowd-sourced textbooks** that students across the globe can use for free in conjunctions with our zero-cost, online courses. You can get started immediately by checking out the textbook outlines that we have posted on Wikibooks:

WIKIBOOKS
Open books for an open world

· POLSC221: Comparative Politics

· CS107: C++ Programming

· HIST101: Ancient Civilizations of the World

· ENGL001: English Composition

· BIO301: Cell Biology

These outlines align in a one-to-one fashion with courses that currently live on Saylor.org, our open courseware website, and were designed by **top professors** from accredited universities.

You can start today; just pick a topic and jump right in. **You will contribute - in a very real, material way - to making education a human right rather than a privilege.**
